- If two electromagnetic waves intersect with each other in the universe, for example, a corpuscle of an electromagnetic wave could collide with a corpuscle of another electromagnetic wave?
Would the collision of two corpuscles of two different electromagnetic waves result in a tiny energy loss of the two electromagnetic waves involved?

Does the energy loss of an electromagnetic wave lead to a wave pull strain and thus to a red shift?

For example, could the cosmic red shift result from the fact that an electromagnetic wave flying through the universe continually crosses other electromagnetic waves, causing corpuscular collisions?

Why can the energy loss of an electromagnetic wave be non-linear by collision?

Can the energy loss of an electromagnetic wave due to collisions be non-linear because the energy of an electromagnetic wave can never become zero or even negative?

Can the energy of an electromagnetic wave therefore not become zero, because the wave length cannot become infinite?
